ADAM AI

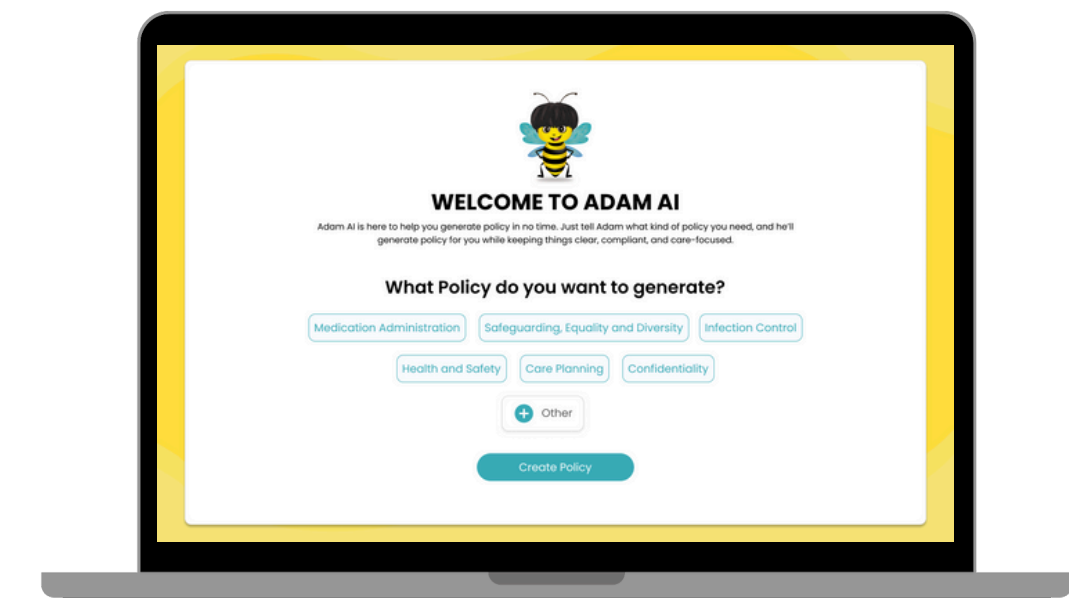

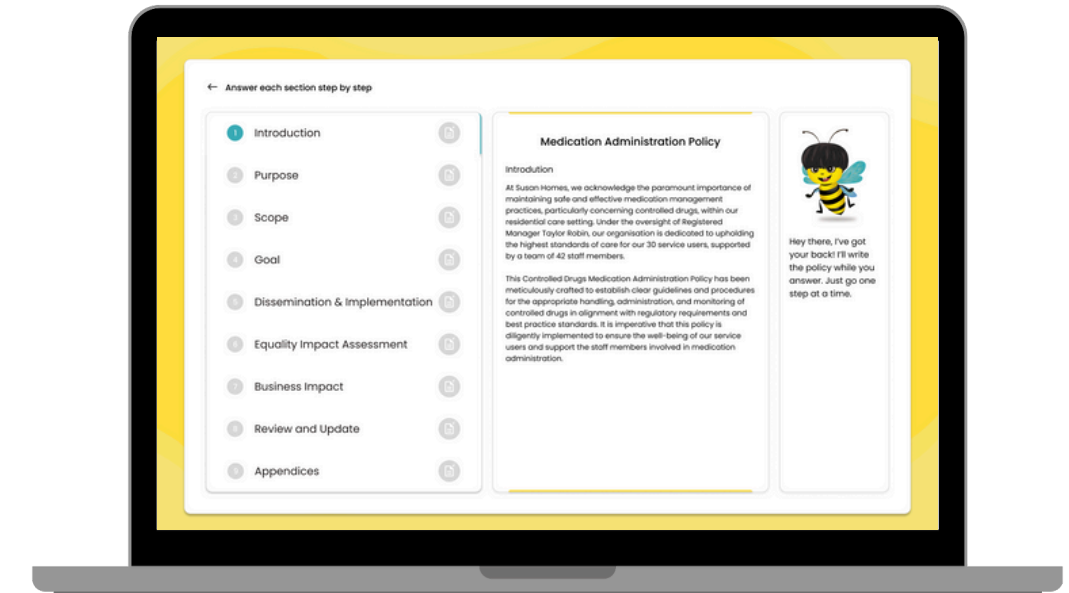

From days of policy writing to minutes of precision

Adam AI is the smart compliance assistant built into CareLearner. It transforms the time-consuming process of writing and updating care policies into a fast, intelligent, and inspection-ready workflow. What once took days now takes minutes, with every output grounded in verified guidance from trusted UK healthcare sources.

How Adam AI Works

- **Reference-Driven Intelligence:** Pulls live guidance from CQC, HSE, NICE, and NHS England.
- **Instant Drafting and Updates:** Generates accurate policies instantly, tailored to your care type.
- **Human-in-the-Loop Workflow:** Managers review and approve in real time for full control.
- **Smart Integrations:** Links policies with incidents, risks, and training modules.
- **Contextual Customisation:** Every policy is tailored to your service and never generic.
- **Zero Hallucinations:** All outputs are verified, cited, and inspection-ready.

Flexible Learning Management System

CareLearner's flexible LMS supports busy professionals with tailored online and blended learning. Study anytime while maintaining educational excellence and compliance confidence.

CPD Accredited - All courses are CPD certified, giving you recognised and career-enhancing professional development.

How CareLearner Enhances Your Learning Experience?

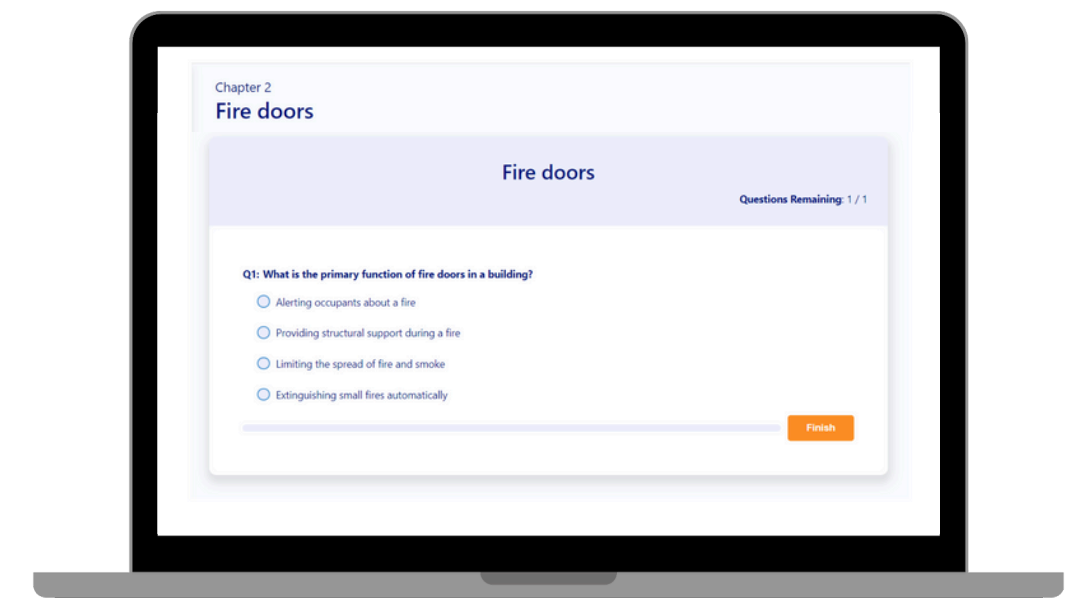

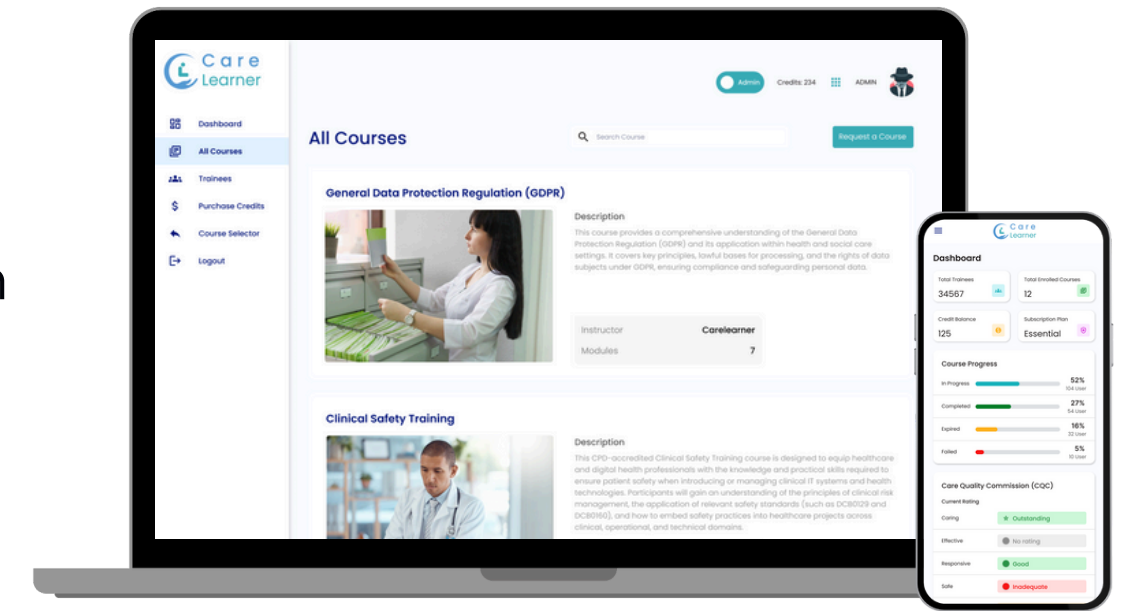

SCORM Compatible

Upload and deliver existing courses easily with full SCORM support for seamless integration.

Interactive Modules: Engage with quizzes and real-world scenarios that strengthen practical skills.

Platform Updates and Versions: Stay ahead with new content and regular feature enhancements.

Blended Learning: Combine online study with in-person sessions for deeper, flexible development.

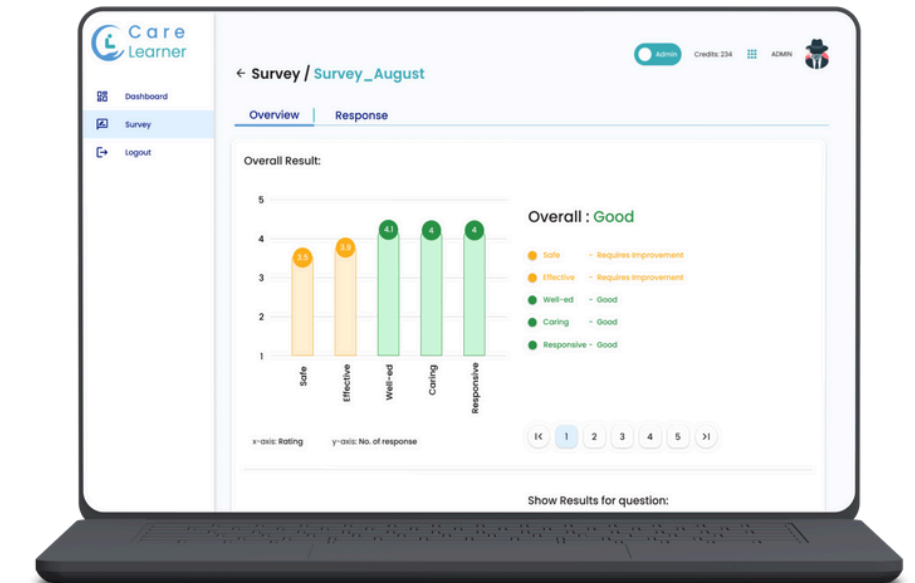

Simplify Compliance Management

Enhance your organisation's understanding of patient experiences through CareLearner's Survey Feature. Effortlessly upload patient and relative details to launch targeted email campaigns for feedback collection. This data is invaluable for generating comprehensive reviews that support Care Quality Commission (CQC) standards. Monitor responses in real-time on our dashboard, ensuring a transparent and continuous improvement process.

Collect Comprehensive Feedback with Survey Feature

Rapid digital reporting: Capture incidents in seconds via web or mobile, including near misses and safeguarding events.

- **Targeted feedback collection:** Effortlessly upload contact lists and send surveys to residents, relatives, or staff.
- **Automated email campaigns:** Schedule and distribute surveys at key care moments such as post-incident reviews, discharge, or annual audits.
- **Real-time dashboards:** Monitor response rates, satisfaction trends, and improvement themes instantly.
- **Regulatory alignment:** Evidence compliance with CQC's Safe, Effective, and Well-led domains through transparent, data-driven feedback.
- **Insight integration:** Feed results directly into your incident and risk dashboards to track how changes impact safety and quality.

Incident Intelligence: From Reporting to Learning

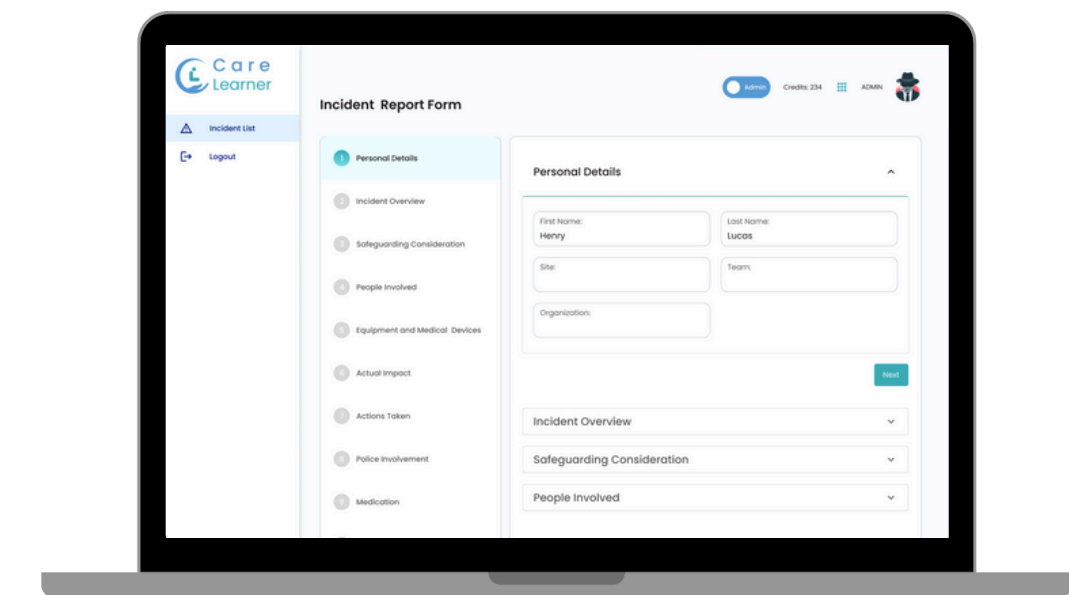

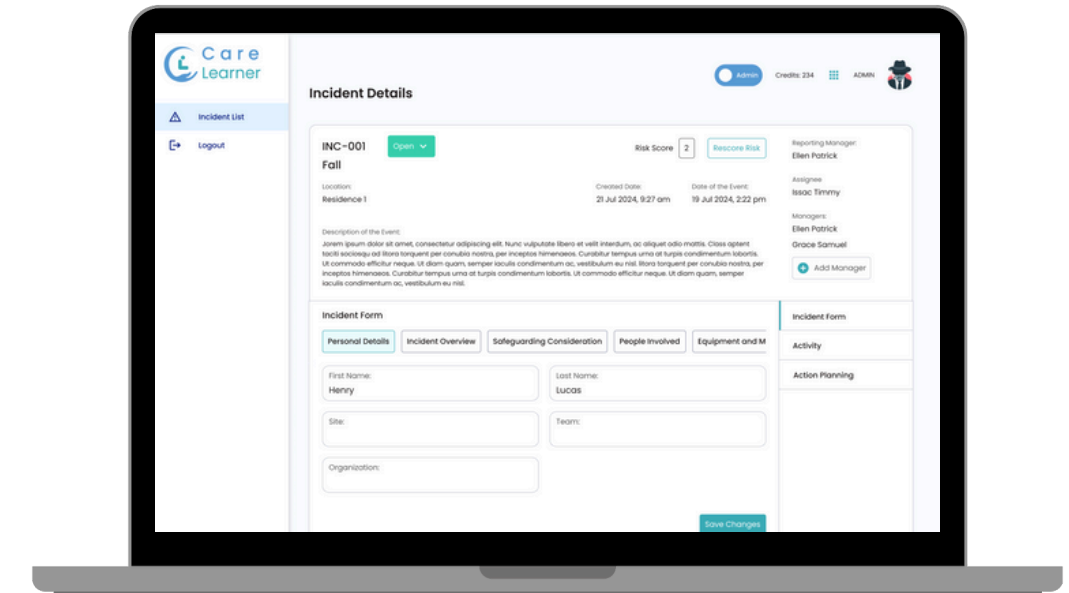

Transform incidents into opportunities for safer care
CareLearner's Incident module closes the loop between reporting, investigation, and learning, aligned with PSIRF standards.

It empowers care teams to report, review, and resolve incidents efficiently — while automatically linking findings to training, policy updates, and audits.

Key Features

Rapid digital reporting: Capture incidents in seconds via web or mobile, including near misses and safeguarding events.

- **Root cause investigation tools:** Structured templates to guide consistent and transparent investigations.
- **Action planning:** Assign corrective actions, track progress, and evidence completion.
- **Incident-to-learning loop:** Automatically trigger relevant learning modules or refresher training.
- **Adam AI insights:** Identify recurring risks, trends, and compliance gaps using data-driven intelligence.

Risk Management: Proactive, Not Reactive

Predict and prevent issues before they impact care
CareLearner's Risk module centralises risk registers, assessments, and mitigations in one digital workspace.

It's built for care providers who want visibility, accountability, and assurance that every risk is being managed.

Core Capabilities

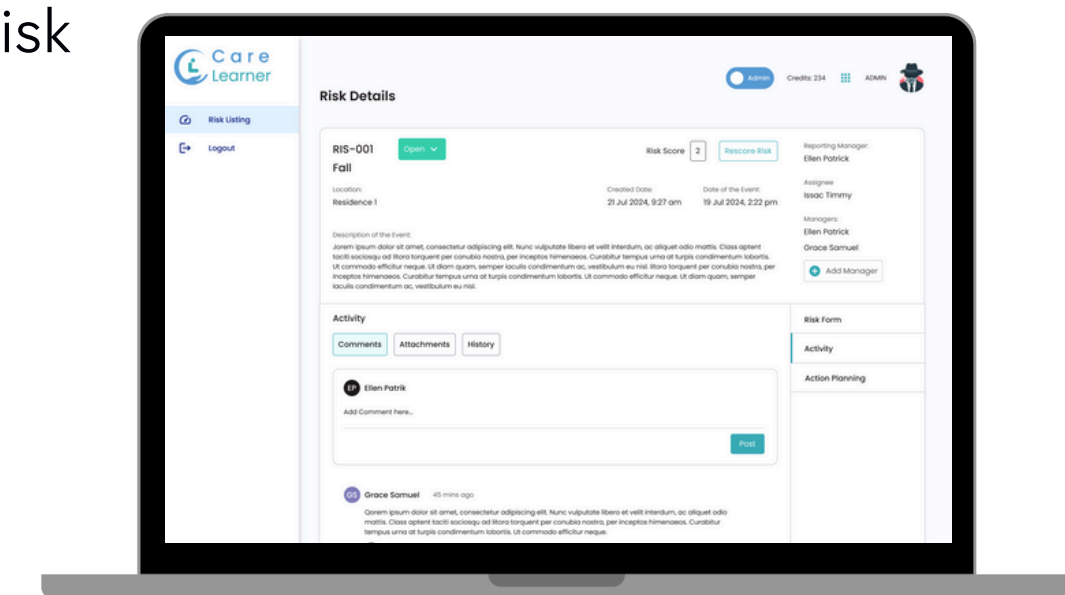

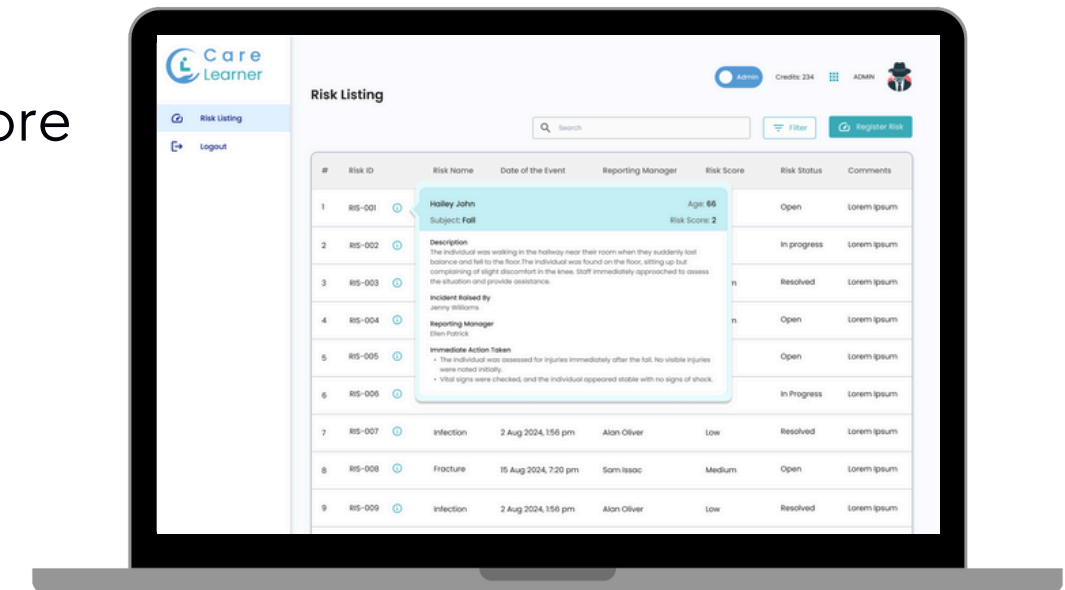

Dynamic risk register: Record, categorise, and score risks (clinical, operational, environmental, and reputational).

Real-time dashboards: Monitor risk ratings, overdue reviews, and ownership by site or team.

Custom templates: Align with local policies and organisational frameworks.

Automated alerts: Receive notifications when a risk level changes or a review is due.

Interconnected ecosystem: Link risks directly to incidents, policies, audits, and training for full traceability.

What It Delivers

For NHS Providers

- Generate and update policies in minutes, not weeks.
- Bespoke to your service, not boilerplate.
- Automatic prompts for training, EQIA, continuity planning.

For Care Groups / Chains

- Standardised frameworks across sites, with local flexibility.
- Every AI-driven change logged – inspection evidence automatic.
- Multi-site dashboard for compliance at scale.

For Health Tech Vendors

- Generate DCB0160 hazard logs, safety cases, and compliance policies.
- API integrations speed up procurement by removing compliance blockers.
- Shorten deployment cycles with inspection-ready documentation.
